

Analyzing Wrangle - WeRateDogs through Twitter

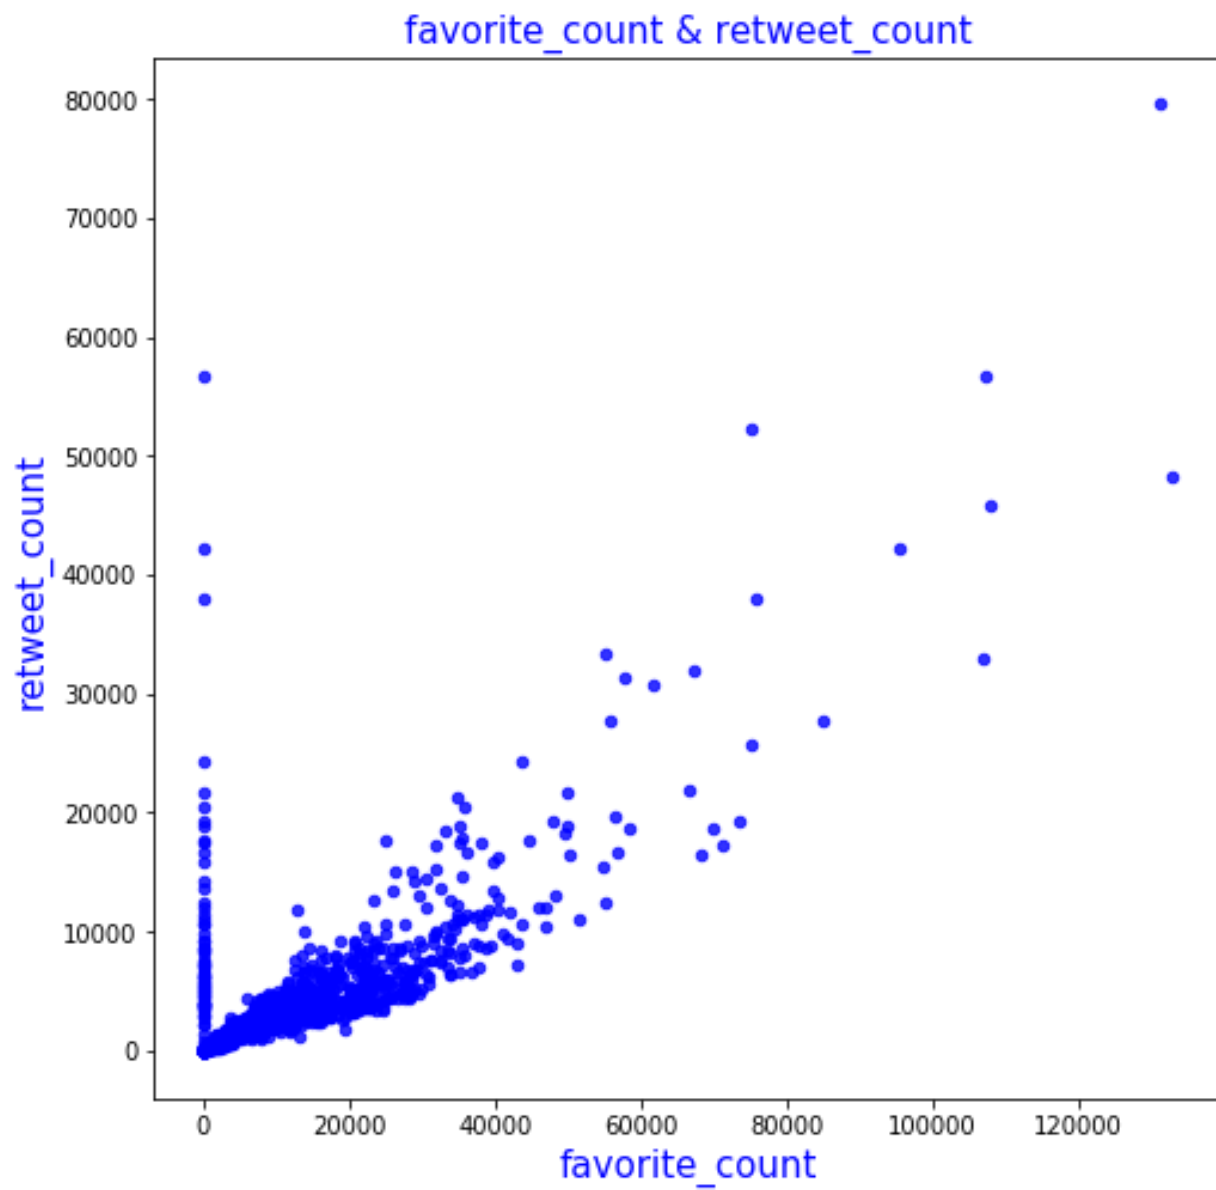

Introduction

WeRateDogs is a Twitter account that rates people's dogs with a humorous comment about the dog.

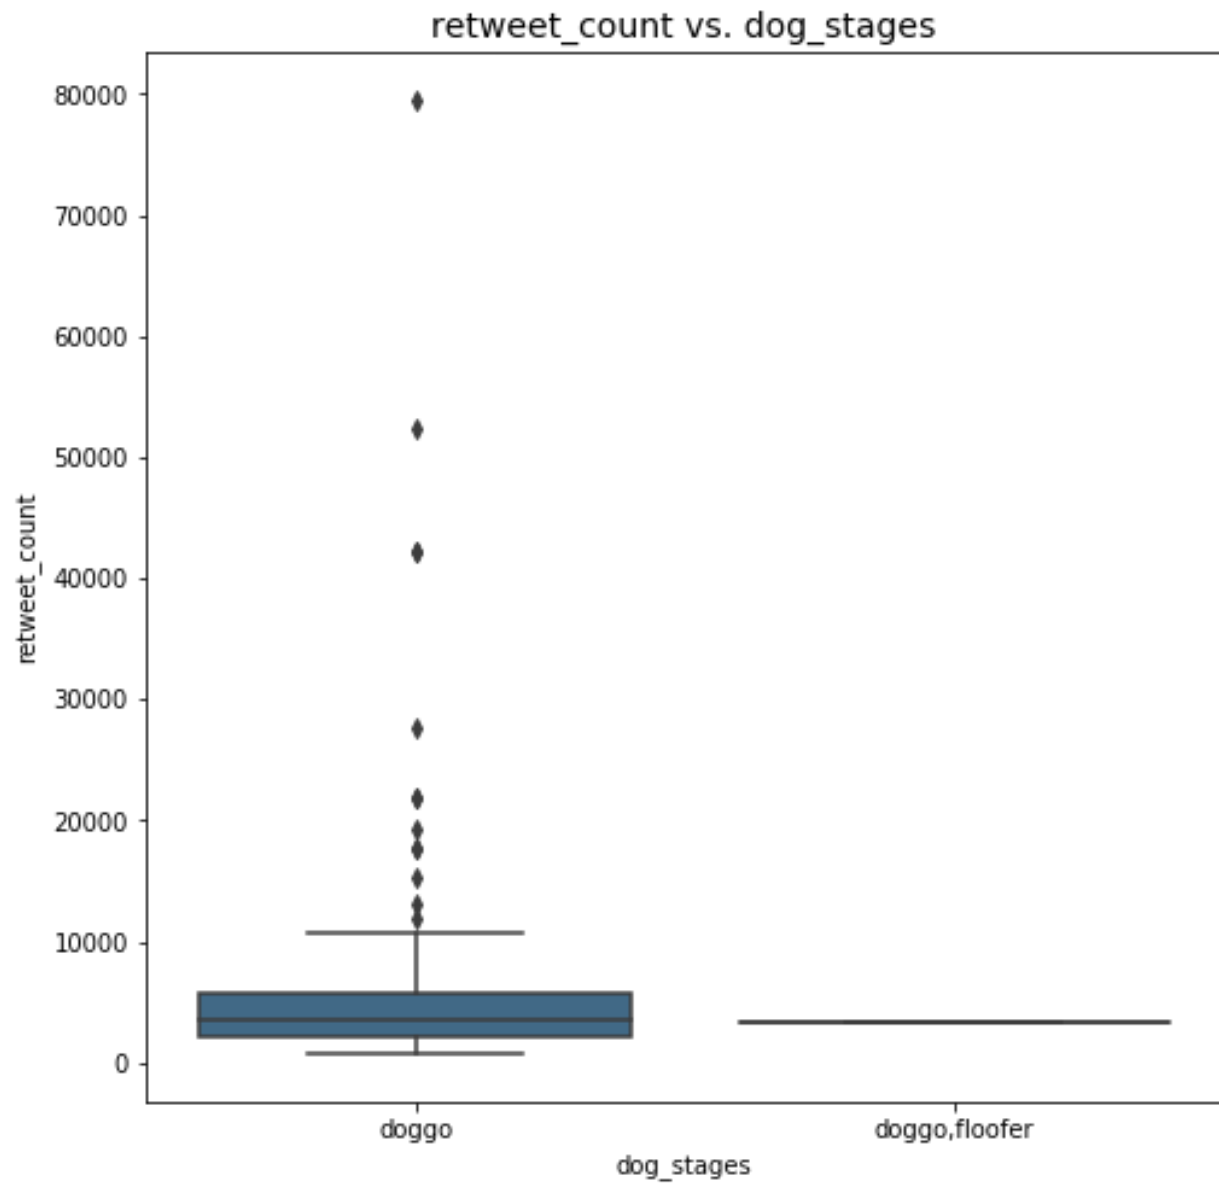

Using code commands and some surf. I went deep through this project to figure out the following:

There are linear correlation between retweet_count and favorite_count that increasing with each others as you can see in this figure:

Highly positive correlation between favorite_count and retweet_count

Also by figuring out the highest retweet we can see through this figure that we can see here that doggo has the highest rate retweets.

This is the most top rating dog retweeted 1776/10

And this was the most favorite dog
